# How to set the video "UNLISTED"?

While uploading your video, don't forget to choose [Unlisted] from the [Privacy Settings] list.

If you forget to do this while uploading, don't worry. You can also do that afterwards.
Login with your account and go to [Video Manager].
Click [Edit] button of the video, then a similar screen with the above will appear.
You can change the [Privacy Settings] from there.
